North American market strengthened as PureGRAPH[®] distribution expands to Canada

Highlights

- **New Distribution Agreement with SuperGrafeo to distribute graphene enhanced cement and concrete solutions to Canada**
- **Growing infrastructure investment and harsh climate creates strong demand for longer-lasting materials**
- **Partnership with one of Canada’s leading engineering institutions to open additional pathways for commercial adoption**

First Graphene Limited (ASX: FGR; “First Graphene” or “the Company”) (FRA:M11) (OTCQB:FGPHF) is pleased to announce its successful partnership with SuperGrafeo Inc. (“SuperGrafeo”) has expanded with a new Distribution Agreement covering Canada, marking an important step in First Graphene’s accelerating North American growth strategy.

The new agreement appoints SuperGrafeo as a distributor for Canada and covers the distribution of First Graphene’s PureGRAPH[®] graphene product range.

Expansion into Canada reflects FGR’s growing commercial momentum being generated internationally and the strong working relationship developed between the parties under the existing Brazil Distribution Agreement executed in December 2024.

In Canada, SuperGrafeo will focus primarily on distributing PureGRAPH[®] enhanced cement and concrete solutions, as well as bitumen and asphalt additive applications.

Canada’s extensive infrastructure network and harsh climate create strong demand for materials delivering improved durability, reduced permeability, crack resistance and longer service life.

The Canadian Government has also committed to working alongside the nation’s cement sector to achieve net-zero carbon concrete by 2050¹.

PureGRAPH[®] has demonstrated its ability to enhance mechanical performance and longevity in construction materials, reinforcing First Graphene’s position at the forefront of next-generation infrastructure solutions.

First Graphene Managing Director and CEO, Michael Bell, said:

“Extending this relationship into Canada is a natural progression and underscores both First Graphene and SuperGrafeo’s confidence in the commercial opportunity presented by this market.

Canada offers substantial opportunity for PureGRAPH[®] in cement and asphalt applications, particularly where durability and sustainability are critical.

We are seeing growing interest and early traction in Canada, and this expanded distributorship strengthens the pathway to advance our North American growth strategy.”

Growing opportunity in Canadian market

First Graphene has already observed growing interest and increasing engagement from Canadian cement producers, asphalt suppliers and infrastructure stakeholders.

This rising traction reflects broader global trends toward sustainability, performance enhancement and lifecycle cost reduction in construction materials.

The Canadian distribution agreement provides a structured and focused pathway to convert this interest into meaningful commercial outcomes within an industry which contributes \$76 billion each year² to the Canadian economy.

SuperGrafeo is also currently participating in the Propolys incubator program at Polytechnique de Montréal, one of Canada’s leading engineering institutions.

This involvement provides access to advanced research networks, technical validation pathways and industry connections that are expected to accelerate product trials and commercial adoption.

Being embedded within this respected innovation ecosystem further strengthens First Graphene’s presence and credibility in the Canadian advanced materials market.

First Graphene continues to focus on scaling high-quality graphene manufacturing and driving commercial adoption across key industrial sectors, including cement, concrete, composites, elastomers and energy storage.

The expansion of SuperGrafeo’s distributorship into Canada represents another important milestone in the Company’s strategy to establish PureGRAPH® as a globally recognised performance additive for advanced materials.

-Ends-

This announcement has been approved by the Chairman.

About First Graphene Ltd (ASX: FGR)

First Graphene Limited is focused on the development of advanced materials to help industry improve. The Company is a leading supplier of graphitic materials and product formulations with a specific commercial focus on large, high-growth global markets including cement and concrete; composites and plastics; coatings, adhesives, sealants and elastomers (CASE); and energy storage applications.

One of the key outcomes these advanced materials offer is the reduction of carbon dioxide emissions, whether directly through a reduction in output of these harmful greenhouse gases or lower energy usage requirements in manufacturing, or indirectly due to enhanced performance characteristics and extending the usable life of products.

First Graphene has a robust manufacturing platform based on captive and abundant supply of high-purity raw materials, and readily scalable technologies to meet growing market demand. As well as being the world's leading supplier of its own high performance PureGRAPH® graphene product range, the Company works with multiple industry partners around the world as a supplier of graphitic materials and partner to research, develop, test and facilitate the commercial marketing of a wide range of sector-specific chemical solutions.

First Graphene Ltd is publicly listed in Australia (ASX:FGR) and has a primary manufacturing base in Henderson, near Perth, WA. The Company is incorporated in the UK as First Graphene (UK) Ltd where it has a strong R&D capability.
