*The gold equivalent (AuEq.) values given in this presentation are determined from gold and silver values and assume the following: AuEq. = gold equivalent calculated using and gold:silver price ratio of 70:1. That is, 70 g/t silver = 1 g/t gold. The metal prices used to determine the 70:1 ratio are the cumulative average prices for 2021: gold USD1,798.34 and silver: USD25.32 (actual is 71:1) from kitco.com. Metallurgical recoveries are assumed to be approximately equal for both gold and silver at this early stage. Actual metallurgical recoveries from test work to date are 96% and 91% for gold and silver, respectively. In the Company's opinion there is reasonable potential for both gold and silver to be extracted and sold.

BACKGROUND FOR PROPOSED MERGER

- Mithril Resources and Newrange Gold Corp. have signed a non-binding heads of agreement for a friendly merger of the two companies [Non-binding term sheet for merger with TSXV newrange gold](#) – 7 March 2023
 - Newrange Gold is listed on the TSX venture exchange (TSXV) under the code NRG
- The transaction is proposed to be completed via a scheme of arrangement⁺ in Australia (which will be considered to be a reverse takeover of Newrange in Canada)
- The parties are currently negotiating the terms of a Scheme Implementation Agreement to give effect to the Merger, which will be finalised by 28 April 2023
- Accordingly, once the Scheme Implementation Agreement is signed Mithril will seek court approval to:
 - despatch the Scheme Booklet to Mithril shareholders
 - hold the Mithril shareholder meeting to approve the Merger
- The parties intend to complete the merger by July 2023
- If the proposed scheme is implemented, it is anticipated that:
 - Mithril will be delisted from the ASX following completion of the merger
 - Newrange proposed to be renamed - Pinnacle Silver & Gold Corp. (subject to TSXV approval)

⁺The proposed scheme requires approval from the courts, and both Mithril and Newrange shareholders

APPENDIX: NEWRANGE GOLD: CANADIAN PROJECTS

- Projects are almost contiguous & comprise a total of 4,454 hectares

NORTH BIRCH & ARGOSY GOLD MINE PROJECTS

- District Scale Gold Exploration In Birch-Uchi Belt
- Past-producing Argosy Gold Mine, in the prolific Red Lake District, has significant depth potential
- Eight kilometre long, untested gold target also in Red Lake area of NW Ontario
- Both projects within 12 km of 4.9 Moz Springpole deposit
- Birch-Uchi Belt 3 times the size of the prolific Red Lake Belt

ARGOSY GOLD MINE PROJECT

- Past producing (1931 - 1952) gold mine adjacent to North Birch Project
- 101,875 oz of gold produced at average grade of 12.7 g/t gold*
- Newrange owns 100% subject to a 2.5% NSR
- Only 72 historic drill holes (>10,500 m) and no work on property since 2004

*from historic records

NORTH BIRCH GOLD PROJECT – REGIONAL SETTING

- Iron Formation Target
- Folded Iron Formation (IF) is an attractive target for gold mineralization
- IF hosted Au deposits are well known throughout the world
- Largest is Homestake Mine, S. Dakota: 40+ Moz
- Similar structural setting to Musselwhite Mine (Newmont-Goldcorp; 7+ Moz in past production & Reserves), also in NW Ontario

NORTH BIRCH FOLDED & SHEARED IRON FORMATION

- 3,850 ha covering the entire Iron Formation (IF) package
- 100% owned subject to 2% NSR
- Several structures cutting the IF
- Only a few kilometres from Argosy Mine & Kostynuk Mine - both show Au in IF

NORTH BIRCH FOLDED & SHEARED IRON FORMATION

- LiDAR survey flown in 2021 shows pronounced break in topographic features following the trace of the iron formation - interpreted as a shear zone, >8km long
- Iron formations are known to be excellent physical and chemical traps for gold mineralization
- As gold is present on the property as well as at the Argosy Mine and Springpole Deposit to the east, there is excellent potential for the North Birch iron formation to be mineralized also
