PARIS DEPOSIT

MINERALISED STRUCTURES

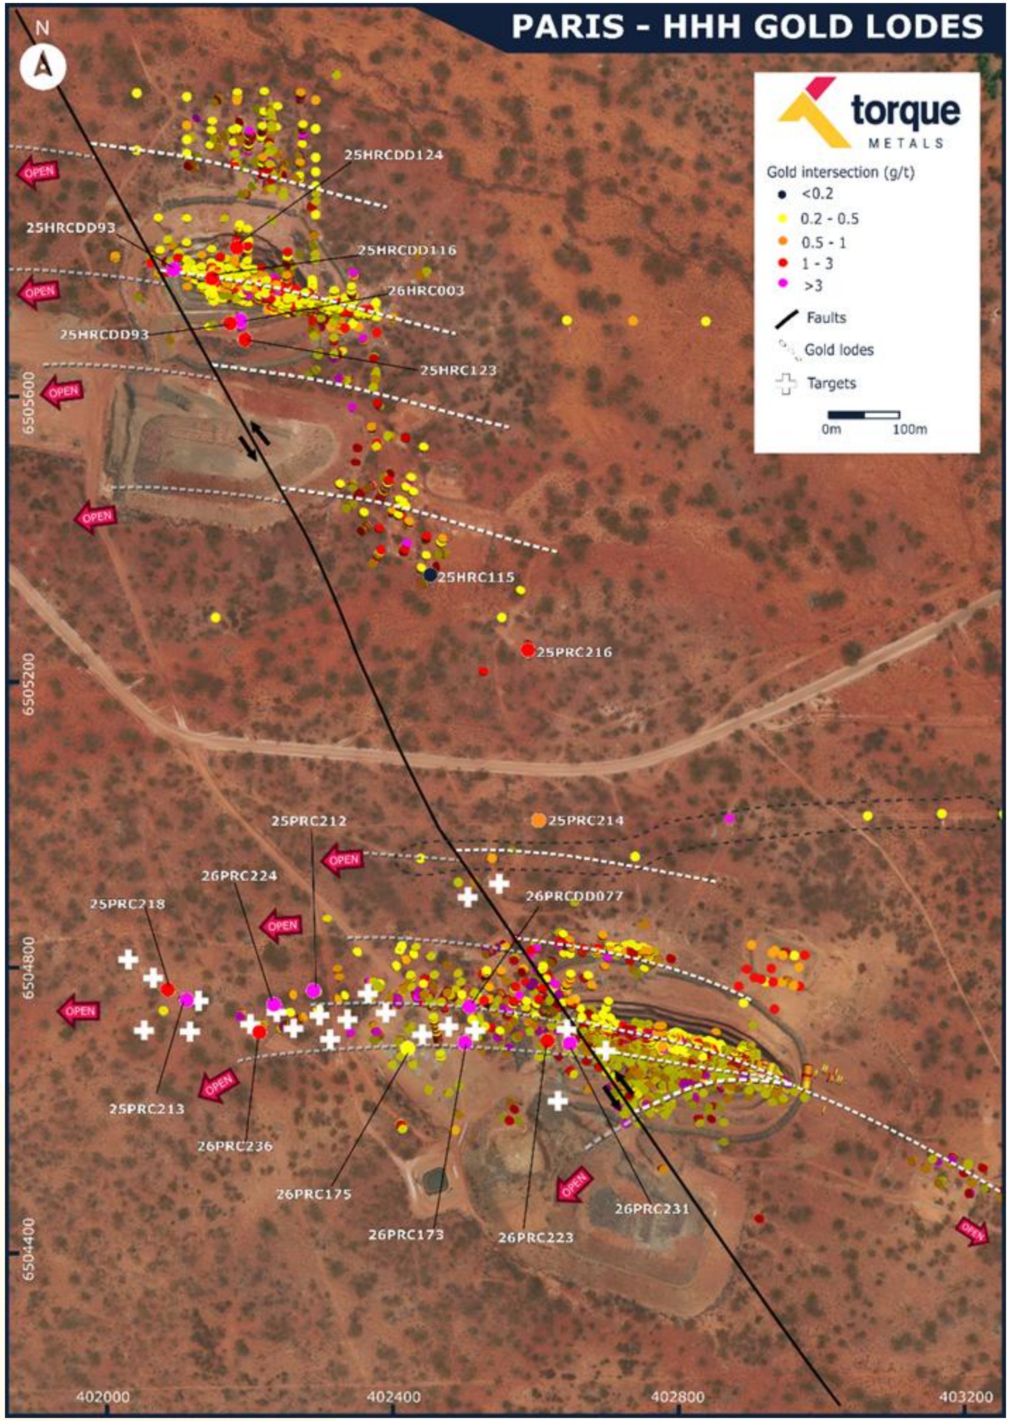
Scalable Multi-Lode Gold System

- Multiple parallel and stacked lodes: Paris Main 1 & 2, Paris Lower 1 & 2. Prospects to the North, East and South of Paris
- Mineralisation distributed across several structures — not a single-shoot system
- Strong along-strike and lateral continuity across lodes
- Several lodes remain open, supporting further resource growth

Consistent High-Grade Intercepts

Key intercepts across the system include:

- 20m @ 5.8g/t Au from 222m incl. 7m @ 13.5g/t Au
- 35m @ 14.12g/t Au
- 27m @ 10.7g/t Au
- High-grade shoots present at both shallow and at depth positions



PARIS DEPOSIT

TAILOR-MADE FOR EM

Rapid target generation	Strong, clean EM responses pinpoint gold-bearing lodes, enabling targeted drilling
Higher return metres	Focused drill programs generate higher returns with enhanced results
Lowered exploration risk	Conductive sulphides in non-conductive basalt creates clear, high-contrast targets, reducing false positives
Scalable across the belt	This signature is recognised along 6km of strike, potentially offering an efficient, repeatable exploration tool

Pyrrhotite and Chalcopyrite

Highly conductive minerals, massive **pyrrhotite ± chalcopyrite** generate strong, clean EM signals

Basalt as host rock

Strong host rock contrast. Sulphide veins sit in non-conductive basalt, so **conductors stand out clearly**

Massive sulphides

Gold coincides with sulphides. Visual gold + high-grade assays coincide with the conductive zones, **making EM a direct pathfinder**

Visible gold

Proven correlation at Paris. EM plates align with drilled lodes and point to untested extensions, **fast-tracking Torque's next drill targets**

HHH DEPOSIT

MINERALISED STRUCTURES

Emerging Multi-Lode Gold System

- ~900m North of Paris
- Deepest hole to date 25HRC123 intersected 2m @ 8.49 g/t from 322m confirming continuity at depth
- DHEM surveys are continuing to support down-plunge exploration targeting at HHH
- Structural interpretation supported by drilling and geological contacts, consistent with the broader Paris system architecture
- Supports HHH as a growth position with potential to add meaningful ounces alongside the core Paris lodes
